MOCA Completes Alabama Tornado Disaster Recovery Effort

NEWTON, Mass. – Oct. 31, 2011 – Following April’s devastating tornado outbreak across much of the United States, MOCA Systems, Inc. (MOCA) deployed 53 construction management personnel 40 hours after its selection by The Federal Emergency Management Agency (FEMA) and the U.S. Army Corps of Engineers (USACE) to oversee the recovery process in Alabama. This natural disaster was one of the most costly in U.S. history, with insured damage as high as \$6 billion, and total damages exceeding \$10 billion.

To support the Tornado Cleanup Operations in 23 counties MOCA provided Quality Assurance Monitors and a management team. MOCA established a temporary project headquarters in the Recovery Field Office (RFO) of the USACE Mobile District in Birmingham, and served as an extension of the USACE staff.

“MOCA recognized the need to put ‘boots on the ground’ as quickly as possible to assist the citizens of Alabama in their recovery from these destructive storms,” said John Jones, MOCA vice president, services. “We were glad to be able to use MOCA’s specialized expertise to ensure a timely—and successful—clean up.”

MOCA monitored debris removal and ensured the work was performed safely with minimal further property damage. In addition, MOCA verified the amount of debris removed by contractors to ensure accurate payment and control costs.
